Letter of Recommendation

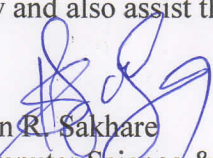

As the Head of the Department of Computer Engineering at our institution, it is a pleasure to recommend my student Tanishq Kothari for a graduate program at your esteemed university. He is one of our promising students who can do well in both academics and in the industry.

Tanishq will be graduating in July 2022 and has done well in his studies with a steady improvement in grades throughout the program. With his present grades, he will obtain his degree with a first-class and distinction. Tanishq attended my classes for the coursework of 'Object-Oriented Programming' and was very well acquainted with the core concepts of Inheritance, Encapsulation, Polymorphism, and Data abstraction. Moreover, working with his team on various mini projects assigned in his academic coursework, he improved his communication and management skills.

Tanishq is a motivated student eager to keep himself abreast of the developments in technology. His project of a B2B web application for agricultural services displayed unique features. The web application had features for connecting two farmers to rent equipment and a facility that allowed workers to apply for farm jobs. I found his experimental setup as well organized, and things are taken care of in detail. The analysis of experimental results convinced me about his programming and analytical skills. He demonstrated this project at our STAR hackathon arranged in collaboration with IEEE. The project's unique features and UI, combined with good coordination among team members, led it to reach the final round of this hackathon.

Tanishq has also been actively involved in various departmental activities and events. In the Model United Nations conducted at our institute, he worked as a chairperson. He displayed outstanding leadership, research, and public speaking skills while educating the new delegates in his committee. Moreover, As the head of the communications department at TEDx at our institute, he efficiently handled the organizing committee, producing good outcomes for the event.

His cheerful personality and willingness to work on feedback assist him in learning further. With his academic performance and successful implementations, Tanishq can do exceedingly well in his graduate studies and research. I would strongly recommend him to your graduate program with an assistantship. He can make significant contributions to the advanced research at the university and also assist the Professors in their teaching.

Dr. Sachin R. Sakhare
PhD (Computer Science & Engineering), LMISTE, MCSI, LMIAEngg
Professor & Head of Department,
Department of Computer Engineering
