Letter of Recommendation

Tanishq Kothari is one of my undergraduate students with excellent potential for higher achievements in the software industry. Currently, he is in the final year of the program and has done exceptionally well in his studies and focused on developing his skills for applying to a graduate program.

Tanishq attended my classes for the coursework of Information and Cyber Security and Computer Architecture and Organization. Through the coursework, he displayed great enthusiasm to learn the concepts of Cryptography, Network Security, Memory Organization, and Processor Organization. He played a significant role in classroom discussions, where he added value through his analytical insights and well-thought questions. He is a quick learner and can develop excellent knowledge of any topic in a short time. He made efforts to learn from diverse sources and applied his skills most competently in practical assignments.

I was pleasantly surprised to learn about his deep-seated desire to understand Cyber Security and encouraged his interests. Moreover, I appreciated his excellent programming skills and advised him to work on a research paper on the Detection of Cyber Security Threats. He worked very hard on this assignment and conducted advanced studies on the application of IoT and Deep Learning to detect cyber-attacks and published his research paper.

Apart from a good academic performance, he volunteered to conduct cyber awareness seminars at several industries. He educated their employees about the impact of cyber threats and the countermeasures available to prevent them. He joined two other members and me to speak on password security, phishing, social engineering, data encryption, E-mail security, and cyber incident reporting. He was an active member of Training and Placement cell of VIIT, Computer Society of India, and has done commendable work in his role. He is an amicable student who has worked with his fellow students with a great sense of empathy and generosity.

Tanishq is thus an aspiring computer science engineer with all the solid attributes for pursuing a successful career in the industry. He has acquired the necessary skills and capabilities for advanced studies in Computer Science and Cyber Security, and I would strongly recommend him to your esteemed university. I would also like to request you to appoint him as a research or teaching assistant that would help him further develop his abilities.
